

Office of THE COMMISSIONER OF AGRICULTURE Raleigh, North Carolina

The North Carolina Department of Agriculture has changed its name to the North Carolina Department of Agriculture and Consumer Services to more accurately reflect the services provided by the Department. Although agriculture will continue to be our primary focus, there are a considerable number of public services the Department performs for the citizens of North Carolina. For example, our Food and Drug Protection Division assures consumers that foods, feeds, drugs, cosmetics, pesticides and automotive antifreezes are safe, wholesome and properly labeled. The Food Distribution Division distributes USDA donated foods to schools, charitable institutions, and needy households. The Marketing Division promotes the sale of North Carolina products abroad and domestically, expanding our markets and helping the economy grow. Our Standards Division tests commercial weighing and measuring devices, checks packaging to verify they contain the stated net contents, and tests motor fuels for compliance. We have a Structural Pest Division that protects the public health and safety by regulating the pest control industry. And these are just some of the areas where the Department provides valuable consumer services.

This Agricultural Statistics book is evidence of our commitment to agriculture. Accurate and complete reports make up the pages of this book which I know you'll find useful as a production and marketing tool. Pictured with me is Bob Murphy, Director of the Agricultural Statistics Division. We would like to give a big thank you to all the farmers, commodity groups, the Agricultural Statistics staff and particularly the enumerators who work closely with our farmers to obtain accurate and objective numbers. Working together, we are able to publish this first-class informative book for you each year.

Cordially, James a Fall

This publication is printed on permanent, acid-free paper in compliance with the General Statutes of the State of North Carolina.

North Carolina's cucumbers grown for pickles are one of the many crops that contribute to the states diverse agricultural economic base. Growers harvest approximately 20,000 acres in North Carolina each year and account for more than 10 percent of the U.S. production. The farm gate value of cucumbers for pickles in North Carolina averages \$20 million annually.

The cover features field and processing scenes associated with the Mt. Olive Pickle Company, Inc. located at the corner of Cucumber and Vine in Mt. Olive, North Carolina. The company has grown from a modest beginning in 1926 to become the nation's largest independent pickle company. Each year, Mt. Olive uses 85 million pounds of cucumbers and peppers. Over 45 million pounds are received from the Carolinas.

The Spring crop is harvested between early June and mid-July and the second crop becomes available from early September to mid-October. At other times during the year the company purchases fresh cucumbers from Florida, Texas, Georgia, Virginia, Maryland, Ohio, Michigan, Mexico, and Honduras. For more information, view Mt. Olive's web site at www.mtolivepickles.com. The other large pickle processor in the state is Cates Pickles in Faison.

History records the use of pickles over 3,000 years ago in Western Asia, ancient Egypt, and Greece. Their use spread throughout Europe and was brought to the New World by Columbus. Amerigo Vespucci, for whom America was named, was a pickle dealer in Seville, Spain before becoming an explorer. George Washington was a pickle enthusiast as well as John Adams, Dolly Madison, and Thomas Jefferson. Pickles were highly regarded by all the pioneering generations because, under frontier conditions, pickles were the only zestful, juicy, green, succulent food available many months of the year.

There are several types of pickles available to the consumer. "Fresh Pack" pickles are those made from freshly picked cucumbers which are graded, washed and packed within hours after they are picked. They may be sliced, chipped, or packed whole in jars with either sweet or dill juice and are vacuum sealed. After packing they are cooked and quickly cooled.

"Refrigerated" pickles are similar to "Fresh Pack" except they are immediately refrigerated after packing instead of being cooked. "Processed" pickles are made from cucumbers that have been graded and placed in a salt solution in large storage tanks. While in the tank, they undergo a lactic acid fermentation process called "curing" or "preserving". During this month long process, salt is gradually added until the cucumber becomes what is known as "brine stock", from which process pickles are made. These pickles may be sweet, dill, or sour and can be sliced, chipped, cubed, or packed whole.

The "Genuine Dill" pickle is a special type of processed pickle that is cured in a weak brine solution with various spices. The "Kosher" pickle can be "Fresh Pack" or "Processed" and has a garlic flavor.

Statistical Reports Program

NORTH CAROLINA AGRICULTURAL STATISTICS brings together the current and historic statistics concerning agriculture in the State. Where possible, information most often requested by farmers, the general public, and workers in government agencies are included.

Reporting of crop and livestock statistics is a service rendered to farmers and others in the State by the National Agricultural Statistics Service of the U.S. Department of Agriculture in cooperation with the North Carolina Department of Agriculture.

The collection and dissemination of agricultural statistics had its start in 1863. This is one of the oldest activities of the United States Department of Agriculture. It was recognized that there were many advantages of a joint relationship between the State and Federal Governments in the development of agricultural statistics. Thus, in 1919 the N.C. Department of Agriculture entered into a

cooperative agreement with the U.S. Department of Agriculture to provide detailed agricultural statistics. The agreement resulted in the creation of the Agricultural Statistics Division of the North Carolina Department of Agriculture.

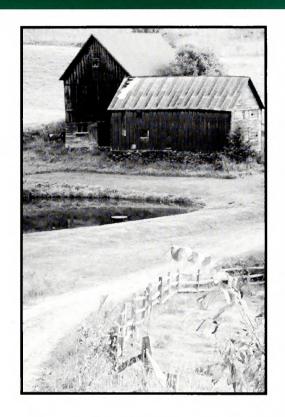

The North Carolina Agricultural Statistics Division publishes official statistics on crops, livestock, prices, and various other agricultural items. A list of the most important reports and the approximate dates of release is shown in the table below. The reports marked with an (*) are issued separately. All others are included in the semi-monthly release entitled "Farm Report". The reports are free for respondents providing information used to compile the reports. Others are charged a nominal fee for the reports, which are available by writing to: State Statistician, P.O. Box 27767, Raleigh, NC 27611 or E-mail at: agstat@MAIL.agr.state.nc.us

¹ Final sector output is the gross value of the commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production. Net farm income is the farm operator's share of income from the sector's production activities. ² Includes machine hire and custom work, forest products sold, other farm income, and gross imported rental value of farm buildings. ³ A positive value of inventory change represents current-year production not sold by December 1. A negative value is an offset to production from prior years included in current-year sales. ⁴ Includes repair and maintenance of capital items, machine hire and custom work, marketing, storage, and transportation expenses, contract labor, and miscellaneous expenses.

North Carolina 1996 Annual Weather and Climate Summary

The year began with above normal temperatures and snow during the week of January 6th. An ice storm the first week of February halted all field work with temperatures 6° below normal. Cold and icy conditions continued in March, giving farmers little time for pasture maintenance and tending small grains. During March 8-12, hard freezes devastated the 1996 peach crop and caused some damage to early blueberry and strawberry growth. March temperatures continued to be below normal leading into April. The first two weeks of April had below normal temperatures requiring frost protection on blueberries and strawberries, especially on the 10th and 11th. Mid-April brought some damaging storms to local areas. Late in the month, farmers were able to recover from the storms and catch up on planting activities that had been lagging.

During the first two weeks of May, a very active part of the planting season, rains delayed field activities. Ten days of warm dry weather followed, allowing farmers to partially recover from the delays. Unfortunately, severe storms in late May, including one confirmed tornado, damaged crops in local areas and kept farmers out of the fields. Early June was very wet, but good weather prevailed from the middle of the month into July.

Hurricane Bertha hit North Carolina the weekend of July 13-14th causing significant crop damage not only to the coastal areas, but well into the Piedmont region. Above average rain continued to fall for three weeks after the hurricane, resulting in surplus soil moisture supplies for the rest of July. August provided very good crop growing

conditions with adequate rainfall and sunny warm weather. Many farmers reported prospects for well above average yields despite the damage caused by Bertha. Crops looked very good until the first week of September.

Hurricane Fran ravaged North Carolina in September. Winds, tornadoes, and tremendous amounts of rain caused damage to crops and livestock, including over \$275 million damage done to farm structures. Harvest of corn and tobacco was only halfway complete when Fran hit and severely damaged the crops remaining in the field. Flue-cured tobacco farmers were hurt not only from the storm, but also by the widespread power outages that caused tobacco to sour in the curing barns.

After the hurricane, several weeks of mild dry weather allowed farmers to try to recover from the storm and prepare for fall seedings. The first two weeks of October had rains that reduced fieldwork, but nonetheless, good progress was made in seeding small grains and harvesting late season crops. Late October provided excellent weather for fieldwork and unharvested crops. Many crops, especially cotton, benefited from the late season warmth increasing yields over post hurricane forecasts. November was uneventful compared to the previous months with some below normal temperatures mid-month, but not enough to delay remaining harvest operations. Soybean and cotton harvests were completed on schedule in late November and early December. The seeding of small grains were also completed on schedule, and above average temperatures in December were very beneficial for seeded small grains.

Total Fertilizer Tonnage Up Slightly

The total amount of fertilizer, including lime and land plaster, shipped in North Carolina rose slightly in 1996 to 2.89 million tons. However, single and multinutrient tonnage increased 8% to 1.81 million tons

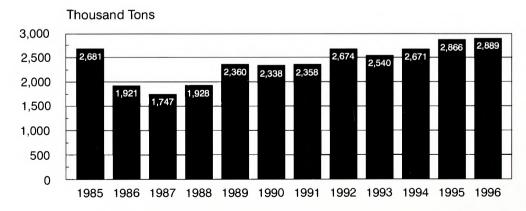

compared with 1.67 million tons last year. This year's lime tonnage decreased 13% from 1995 and totaled 947,126 tons. Land plaster shipments, at 130,820 tons, rose 28% from last year.

¹ Some counties not shown separately to avoid disclosing individual operations. ² Includes total income from farm and commercial forestry as estimated by County Extension Agents. The portion from commercial forestry is not included in cash farm receipts from farm marketings. ³ This estimate includes both commercial farm ponds and marine seafood. Trout and catfish income from commercial farm ponds was estimated by County Extension Agents. The income from seafood was based on dockside value of the commercial catch at the point of landing, as estimated by National Marine Fishery Service, U.S. Department of Commerce, Beaufort, N.C. Counties may not sum to equal district totals to avoid disclosing individual operations.

1996 North Carolina Crops Summary

Tobacco Yields Up

North Carolina **flue-cured** tobacco acres for harvest, yield, and production were up despite two major hurricanes ripping through the major producing areas. Harvested acres increased 11% to 280,000 acres. Flue-cured tobacco yield, at 2,045 pounds per acre, increased 171 pounds from the drought prone 1995 season. In turn, 1996 total production increased 21% to 573 million pounds. The value of the flue-cured crop totaled \$1.1 billion, up 23% from 1995. Growers received an average price of \$1.836 per pound, up 2% from last year.

Burley tobacco producers harvested fewer acres and had a difficult year battling the blue mold epidemic, yet yield and production still increased relative to 1995. Burley growers produced a total of 13 million pounds in 1996, up 24% from 1995. Value of the crop was placed at \$24.9 million compared to \$19.3 million in 1995.

Cotton Production Second Highest On Record

The State's **cotton** crop totaled 1 million bales in 1996, 26% more than a year earlier and the highest since the record production in 1926. Area harvested totaled 710,000 acres, 11% below 1995. The yield per acre averaged 677 pounds, 198 pounds more than the previous year's average and the third highest yield ever. The value of the crop was \$357 million, 19% more than 1995. The average price was 74.2 cents per pound, compared with 78.3 cents per pound received in 1995. **Cottonseed** production in North Carolina totaled 343,000 tons in 1996, the highest since 1928 and 22% higher than the previous year. Value of production was \$36 million and averaged \$106.00 per ton. This was \$28.00 per ton more than 1995.

Corn Production Up

The production of **corn** for grain in 1996, totaled 85.5 million bushels, 14% above the 1995 production. Tar Heel farmers harvested 900,000 acres with an average yield of 95 bushels per acre. This compares with 700,000 acres harvested in 1995 yielding 107 bushels per acre. The value of the crop totaled \$291 million, up 10% from the previous year's crop. The average price was down 14 cents to \$3.40 per bushel.

Soybean Yield Increases

North Carolina **soybean** yield increased 4 bushels in 1996 to 29 bushels per acre. Production totaled 34.8 million bushels, 30% more than the 1995 production. Harvested area totaled 1.2 million acres, 12% above the previous year. The value of production was placed at \$233 million, 25% more than 1995. Farmers received an average price of \$6.70 per bushel compared with the 1995 average price of \$6.95 per bushel.

Wheat Production Down

Wheat production in North Carolina, at 26 million bushels, was down 8% in 1996. The statewide yield of 44 bushels per acre was unchanged from 1995. Total acres harvested, at 590,000, were down 8% from the previous year. The value of the crop totaled \$109 million, 6% above a year earlier. Price per bushel averaged \$4.20.

Peanut Yield and Production Up

North Carolina **peanut** growers produced a total of 367.5 million pounds, up 6% from 1995. Favorable late season conditions contributed to the crop yielding 2,940 pounds per acre, an increase of 530 pounds over 1995's yield. Growers harvested 125,000 acres, 19,000 fewer acres than in 1995. The value of the 1996 crop was \$96.7 million, 7% less than the 1995 crop. The market year average price for 1996 was 26.3 cents per pound.

Sweetpotato Production and Yield Down

North Carolina **sweetpotato** production in 1996 totaled 434 million pounds, down 10% from last year. The average yield per acre was 140 cwt., down 10 cwt. from a year ago. The crop was valued at \$46.4 million, down 17% from 1995. The average price was 10.7 cents per pound.

Potato Crop Improves

The 1996 production of **potatoes** in the state totaled 334 million pounds, up 5% from 1995. Value of production, at \$22.6 million, was 8% above the 1995 crop. The average yield per acre was 183 cwt., up 5 cwt. from 1995.

Fruit Production Down

Commercial utilized production of North Carolina **apples** in 1996 was 200 million pounds, down 26% from 1995. The short crop led to higher prices which increased value of production to \$24 million, 6% higher than 1995.

An early season freeze reduced the level of production of **blueberries** in North Carolina. Growers produced 11 million pounds of blueberries in 1996, a 21% drop from 1995. The crop was valued at \$11.2 million, 12% below last year.

The 1996 North Carolina **peach** crop was practically wiped out by early spring freezes. The utilized peach production totaled only 1.9 million pounds compared to the 32 million pounds produced in 1995. The crop was valued at \$764,000, 89% lower than 1995.

Vegetable Production Mixed

North Carolina's bell pepper production in 1996 was 49.6 million pounds, up 118% from a year ago. The value of production totaled \$10.4 million. Sweet corn production, at 63 million pounds, was double last year's crop and was valued at \$8.5 million. Fresh market cucumber production totaled 55 million pounds, up 28% from a year earlier. The value of production totaled \$7.2 million. Production of processed cucumbers totaled 120 million pounds, down 17%, with a value of \$13.1 million. Tomato growers produced 22.4 million pounds, 7% more than 1995. The value of the crop was estimated at \$6 million. Farmers produced 16.1 million pounds of strawberries, down 16% from the previous year. The value of the crop was estimated at \$10.8 million. Watermelon producers harvested 145 million pounds with a value of \$6.5 million. Snap beans harvested for all purposes was estimated at 18.6 million pounds, 15% below last year. Value of production totaled \$5.6 million. All cabbage production totaled 53.9 million pounds, 44% less than 1995. The value of the crop was placed at \$5.1 million.

Floriculture Sales Exceed \$85 Million

The 1996 wholesale value of all floriculture crops for North Carolina producers with \$10,000 or more in sales was estimated at \$89.4 million. A total of 169 growers reported more than 11 million square feet of covered area and 366 acres of outdoor production. Only growers with sales of \$100,000 or more were surveyed for selected floriculture crops. The wholesale value of the selected 41 floriculture crops surveyed totaled \$85.4 million in 1996, up 11% from 1995. The proceeding text and table is based upon growers with sales of \$100,000 or more.

BEDDING/GARDEN PLANTS accounted for \$44 million of the overall sales, up 15% from 1995. Production of flowering hanging baskets showed the largest increase in 1996 to \$10.3 million, up 18% from a year ago. Flats of bedding plants increased 13% to \$20 million. Potted bedding plant sales increased 17% in 1996, totaling \$14 million.

POTTED FLOWERING PLANTS accounted for \$33 million of the total wholesale value, up modestly from 1995. Poinsettias led this category with \$11.6 million generated from 4.1 million pots of all sizes. Potted chrysanthemums were up slightly in 1996 with an equivalent wholesale value of \$5.7 million from 1.7 million pots. Easter lilies, finished florist azaleas, and kalanchoes generated \$3.5 million in sales, while the remaining \$12.2 million came from all other flowering plants.

FOLIAGE HANGING BASKETS AND POTTED FOLIAGE plants had an equivalent wholesale value of \$6.7 million, up 49% from the previous year. The value of foliage hanging baskets increased 31% to \$4.5 million, and the net value of sales for potted foliage more than doubled from last year's sales and totaled \$2.2 million.

CUT FLOWER sales, at \$1.3 million, dropped 3% from 1995.

1996 North Carolina Livestock Summary

Cash Receipts Exceed \$4 Billion

Cash receipts from all livestock, dairy, and poultry products continued its upward trend and totaled \$4.4 billion, up 19% from 1995. Hogs led the charge again this year with an increase of \$474 million or 37%. Broilers rose 13% to 1.3 billion, followed by turkeys with an increase of \$30 million or 5%. Receipts from milk were up 12% to \$212 million, and eggs rose by \$15 million, up 7% from 1995. Cattle and calves increased 5% to \$154 million. Catfish and trout sales rose 11% for a \$1.0 million gain. Sheep and lambs advanced 8%, and honey sales went up 7%. Wool showed decreased sales, dropping 28%.

Hogs continue to be the number one commodity in the state with 22.4% of total sales, followed closely by broilers at 16.8%. Both commodities surpassed tobacco for the third time. Tobacco has a 13.1% share of sales.

Hogs Inventory - Income Higher

Hog and pig inventory in North Carolina reached a record high 9.3 million head in December 1996, up 13% from the previous record high 8.2 million in 1995. Pork production climbed to a new record high of 3.4 billion pounds, exceeding last year's record by 8%. Cash receipts rose 37% to a new record high \$1.7 billion in 1996. A crop of 16.2 million pigs was produced in the state during the year, another record high, and 16% above the 14.0 million in 1995. The average litter size was 8.7 pigs, compared with 8.6 in 1995.

Hog marketings for the year increased 16% to 14.2 million head. The average price for hogs increased 26% to \$52.80 per cwt. The value of home consumption was up 22% to \$3.2 million. The estimated 6,000 hog operations in the state during 1996, were down 600 farms from 1995 or a decline of 9%.

Broilers Reach Record High

Production, prices and income all reached record highs for broilers in 1996. Income from broilers was \$1.3 billion, up 13% from last year's record. This was derived from a record high production level of 3.5 billion pounds, up 4% from 1995. Price per pound reached a record high 37 cents per pound in 1996, up 3 cents from last year.

North Carolina is ranked fourth in the nation for broiler production with a total of 681 million birds. Broiler income contributes 30% of the livestock, dairy and poultry category and represents 17% of total farm cash receipts for the state.

Turkeys Number One

North Carolina retained the number one ranking for turkey production in 1996 with a record high total of 1.5 billion pounds produced, up 3% from the previous year. The number of turkeys raised was 59.5 million in 1996, down 3% from last year. Turkey price per pound increased 2% to 42 cents allowing cash receipts to reach a record high \$612 million, 5% above last year's record high \$582 million.

Egg Prices Higher

The value of egg production in North Carolina increased 7% in 1996 to \$218 million. The increase was caused by a 13% price increase to 87.5 cents per dozen which more than offset the 5% decline in eggs produced at 3.0 billion. Receipts were the largest since 1989 when \$222 million was recorded. The state ranks ninth nationally in the value of egg production.

Milk Receipts Higher

Cash receipts from marketing of milk and cream produced in North Carolina totaled \$212 million in 1996, up 12% from 1995. The value of milk produced was also up 11% at \$215 million. Producer returns averaged \$16.70 per hundred-weight, up 21% from 1995. Milk production fell 8% in 1996 to 1.29 billion pounds compared with 1.40 billion pounds in 1995. The average number of milk cows on farms, at 81,000 head, was 5,000 less than the average in 1995. Output per cow, at 15,901 pounds, was 413 pounds below 1995.

Cattle and Calf Marketings Increase

Cattle marketings increased 20% to 250,000 head, and calf marketings increased 22% to 235,000 head in 1996. Calf marketings for 1996 tie 1976's record high marketings. Cash receipts from cattle and calves in the state totaled \$154 million, up 5% from 1995. Cattle and calf prices per cwt., at \$45.40 and \$48.10, dropped 9% and 25% respectively. Calf births rose 2% to 520,000 head. Inventory of cattle and calves in North Carolina as of January 1, 1997 was down 1% and totaled 1.19 million head.

Trout Sales Rise

North Carolinas' commercial trout growers sold a total of 5.3 million pounds of trout (foodsize, stockers, and fingerlings) valued at \$7.1 million during the 12 month period of September 1, 1995 and ending August 31, 1996, up 7% from the previous year. The state ranks second in the nation in the amount of trout sold.

Foodsize sales decreased 15% to \$5.0 million and averaged \$1.16 per pound, 1 cent below the previous year. Sales to processors accounted for 77% of foodsize sales with another 10% going to live haulers, 5% to restaurants and retail outlets, 5% to other producers, 2% to fee and recreational fishing, and 1% directly to consumers. Trout losses totaled 419,000 pounds for the year with 55% lost to disease, 13% to floods, and the balance to predators, chemicals, drought, and theft.

Catfish Sales Exceed \$2 Million

The 60 commercial catfish growers in North Carolina had sales of \$2.5 million in 1996, up 24% from the previous year. The water surface area used totaled 1,400 acres, unchanged from the previous year. Ninety five percent of foodsize catfish sales went to processors with the remainder going to consumers, retail, and other producers. The average price received for foodsize catfish was 79 cents per pound, unchanged from the previous year, but 2 cents above the national average price. North Carolina producers received slightly more per pound for their fish than the producers in the leading producing states of Mississippi, Alabama, and Arkansas.

Sheep Prices Record High

North Carolina sheep and lamb prices, at \$33.00 and \$85.00 per cwt., rose to record highs in 1996, up 16% and 24% respectively from 1995. These prices offset a 32% drop in marketings to record an 8% increase in cash receipts, rising to \$501,000.

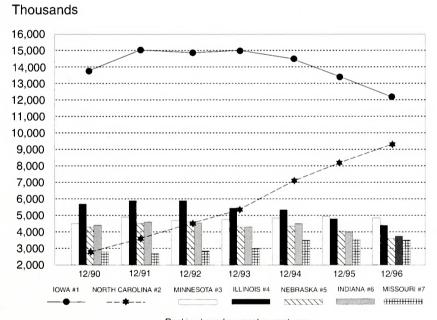

Sheep and lamb inventory rose to 13,200 head as of January 1, 1997, a 2% increase from a year ago. The 1996 lamb crop dropped 1% to 10,400 head.

The North Carolina Department of Agriculture and Consumer Services publishes annual county statistics for selected crops, livestock, poultry, dairy, and cash receipts. Census of Agriculture statistics are compiled by the United States Department of Commerce and are published every five years. Entries designated with an asterisk (*) were not published if there were fewer than 50 harvested acres of a specific crop, 500 hogs, 200 beef or milk cows, 500 total cattle, 200,000 broilers, 300,000 turkeys, or 5,000 chickens in a county. Some counties were not published to avoid disclosing individual operations.
